INTERSTEEL Doorkeeper®

Security is secure again

House robberies have become an increasing problem in recent years. The door limiters available on the market up to now do not prevent a door from being violently forced. The chain breaks or the clasp can be prised open. The Doorkeeper® stops this and keeps the intruder outside.

The Doorkeeper® is a door limiter which meets the quality requirements stipulated by SKG in assessment guideline SKG-KE 573. Under the PKVW a door limiter is obligatory in new-build properties from August 2011, provided that it complies with SKG-KE 573. In all probability door limiters will also be required for existing properties under the PKVW with effect from 1 July 2014.

The Doorkeeper® is very robustly constructed from solid stainless steel which is highly resistant for being bent using a tool such as a crowbar or screwdriver. The door limiter fits on all inward-opening doors and can be used on door thicknesses up to 65 mm.

Benefits:

- Cannot be opened from the outside.
- Complies with the quality requirements of SKG KE 573.
- 304 stainless steel.
- PKVW approved.
- Easy to install.
- Universal application.
- Available in two designs: Bauhaus and Curve.
- To be used on inward-opening doors.
- Can also be used for fall prevention, for example on open windows in children's rooms.

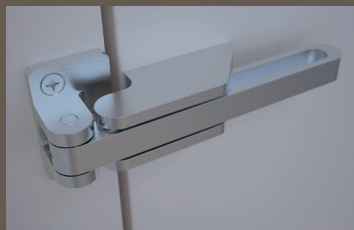

Specifications

Bauhaus	Curve
• Material: 304 stainless steel	• Material: 304 stainless steel
• Dimensions: H 30 x W 265 mm	• Dimensions: H 30 x W 265 mm
